

WALL MOUNTED EARTH LOOPS

The Wall Mounted Earth Loops are installed onto the wall protecting the bottom two wires of a wall top fence. They are used to enhance the level of security offered by an electric fence by detecting attempted separation of fence wires and leaving just enough room for natural movement of the live wire. When the live wire touches the loop a connection is made and the alarm will sound. Available in stainless steel, angled or straight to suit the type of Nemtek bracket used.

Features:

- Easily installed onto the wall
- Easy to retrofit onto an existing electric fence

Specifications:

Material 304 Stainless steel
Type Angled
 Straight
