

30 years of designing and manufacturing innovative electric fencing solutions

NEMTEK
Electric Fencing Products

SECURITY QUICK REFERENCE

ELECTRIC FENCING PRODUCTS THAT DELIVER PEACE OF MIND

INTRODUCTION

Nemtek is a leading supplier of innovative electric fencing products both locally and abroad. Nemtek's electric fencing solutions are regarded as the product of choice by consumers, companies, industries, governments, local authorities and industries in protecting their utilities, correctional facilities and defence infrastructures.

With over 30 years of experience in designing electric fencing products and technologies, Nemtek has the in-house knowledge and expertise to manufacture and supply the full spectrum of energizers and fencing hardware applications for residential, commercial, industrial, utilities and high-risk security fencing.

Residential

Homeowners trust Nemtek products to provide security for everything they value most. Our extensive range of electrified fencing security products has helped ensure the safety and well-being of households for over 30 years. Nemtek products are trusted and recommended by many homeowners to offer better security for their families and friends. The continually evolving and inventive Nemtek range offers innovative solutions for any residential application, with numerous choices to ensure that homes are secure without compromising on aesthetics.

Commercial

Whether you need to secure car and boat showrooms, office and commercial parks, caravan, car and motor home displays, outdoor showrooms, or retail complexes, Nemtek has advanced security solutions for commercial applications that do the job. We have identified this need for secure perimeter protection combined with aesthetically pleasing designs that do not compromise on the effectiveness and the performance of the electric fence. Solar farms, oil refineries, steel industries and mining sites often need to be protected from intruders, both from a safety and a security point of view. The need to protect large industrial areas has been met by Nemtek's range of full height fencing solutions. Nemtek systems can be added onto existing fences (piggyback) or can be completely freestanding where no fence exists. In many instances, multiple fence zones are required and the modular design of Nemtek energizers makes this easy to achieve.

Infrastructure

Government facilities and critical infrastructures need to be protected. Power distribution facilities, water reservoirs, transport depots, pumping stations and gas pipelines are some of the types of utilities that often need to be protected, as disruptions or interferences can cause large-scale implications for governments, cities and the community as a whole. Protection is often required to prevent harm to individuals by stopping them from gaining access to sensitive or dangerous areas such as train depots or even electrical transformers and electrical distribution areas. The Nemtek range of hardware, software and energizer design will ensure that a reliable security solution is available for these infrastructures. Nemtek manufactures all its products with high security in mind, and our range of products can be integrated with other technologies such as cameras. High-security sites can also be remotely accessed and monitored with the Nemtek solutions. Our vast experience in these types of sites in many different parts of the world have made Nemtek a trusted source for products and knowledge to address most high-security needs. These sites include prisons, airports, naval bases, border fences, embassies, mints and money distribution points.

ENERGIZERS

-  residential
-  commercial
-  industrial
-  utilities
-  high security

Nemtek's range of electric fencing energizers are suitable for a variety of applications, for both home and commercial security. Robustly manufactured from top quality materials, Nemtek's energizers cater to your specific electric fencing needs.
